

CAMEO CONNECT® APP

CONFIGURE, RESET AND SERVICE YOUR FIXTURES WITH A SIMPLE TAP.

The **Cameo CONNECT® App** brings fast and intuitive NFC-based workflows to modern lighting setups. Whether you are preparing fixtures in advance, resetting them after an event, or sharing service data in seconds – Cameo CONNECT® makes handling your devices easier and faster.

NFC SETUP & CONFIGURATION

Set up fixtures in seconds – transfer settings instantly on site.

With **NFC Config & Templates**, you can pre-configure your Cameo fixtures directly in the app and apply the settings with a simple NFC scan. This is perfect for preparing fixtures at the office or in the warehouse and transferring the configuration later on set.

How it works:

Select a fixture model or template in the app, adjust the required parameters, and simply hold your smartphone near the NFC-enabled fixture to write the configuration.

NFC FACTORY RESET

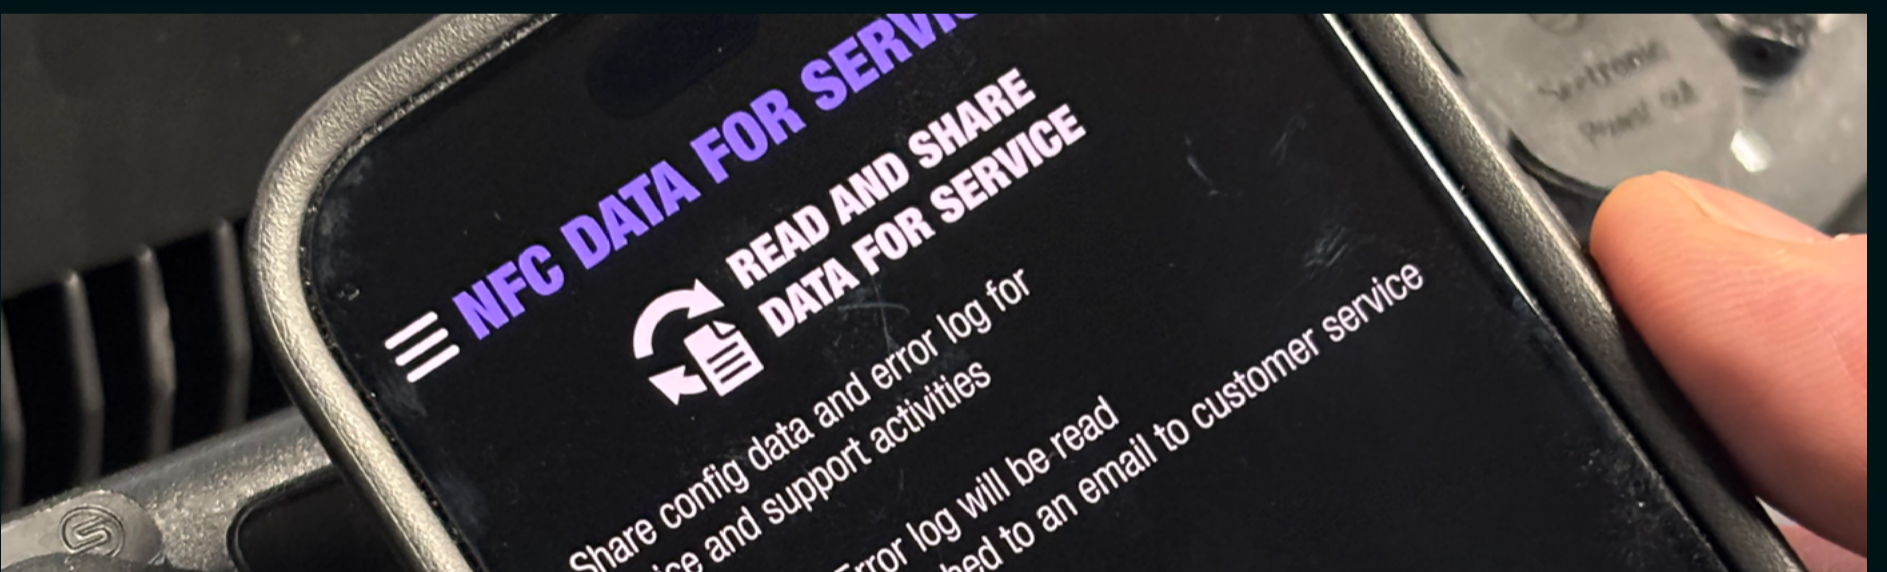

Reset fixtures to factory defaults – anytime, anywhere.

Need to clear a fixture before storage, rental return or re-installation? The **NFC Factory Reset** feature allows you to restore compatible Cameo devices to factory settings with just one NFC scan.

How it works:

Activate “Reset to Factory Defaults” in the app and hold your smartphone near the fixture. If the unit is powered on, the reset happens immediately. If it is powered off, the reset will be executed during the next boot sequence.

NFC READ & SHARE DATA FOR SERVICE

Read fixture data and error logs – send them directly to support.

When troubleshooting is needed, the Cameo CONNECT® App allows you to read configuration data and error logs via NFC and share them instantly for service purposes. This creates a direct bridge between the fixture and customer support.

How it works:

Scan the fixture with your smartphone to read service data. The app then creates a ready-to-send email including the device information and log data. Just add information about your issue and it can be forwarded directly to customer service with all necessary data and background information to take care of your request.

THREE POWERFUL **NFC** WORKFLOWS – ONE SIMPLE APP. **CAMEO CONNECT®** IS DESIGNED TO MAKE FIXTURE HANDLING SMARTER, FASTER AND MORE RELIABLE FOR EVERY LUMEN BEING.

And this is only the beginning: **RDM Service & Update** functionality is already on the roadmap and will be available soon – enabling device discovery, firmware updates and advanced service actions directly through the app.
